

COMPLIANCE SOFTWARE FOR CARE HOMES

You got into care because you *care*. The paperwork came with it.

Priced for your margins. Built for your teams. CQC and CIW, captured as the work happens.

You became a registered manager because of the people in your care, not the filing, the evidence logs, the safeguarding trails, or the quarterly CQC framework updates you're supposed to have read, understood, and actioned before the next inspection cycle. But here you are: **carrying all of it**, on top of everything else, with margins that leave no room for the mistake you didn't know you were making.

That's not a failure of management. It's a failure of the tools available to you. Care has always been underserved: enterprise software priced for corporate chains, static checklists that go out of date the moment guidance changes, nothing that works the way your teams actually work.

Live **Fit for Audit score** across every home, and a manager's daily task list on the floor.

Fit for Audit was built for you.

- ✓ Every evidence log, captured as it happens: CQC and CIW records timestamped, structured, retrievable in seconds.
- ✓ You know your gaps before the inspector does: site-level dashboards show live status across every domain.
- ✓ When CQC changes its framework, you're already compliant: tasks and workflows update automatically, the same day.
- ✓ ReflowIQ tells you where the danger is: a ranked, specific action list updated every day, not a dashboard to monitor.
- ✓ For groups: one view across every site: organisation-wide visibility from a single login.

Care has always been underserved. *Not anymore.*

One platform, every framework: CQC and CIW. The full system, captured the same day guidance changes, built for the way your teams already work.
