

Right now, one of your schools has a compliance problem building. You just don't know which one.

See every site from a single dashboard, without driving to each school to find out.

THE COST OF GETTING IT WRONG

£6m

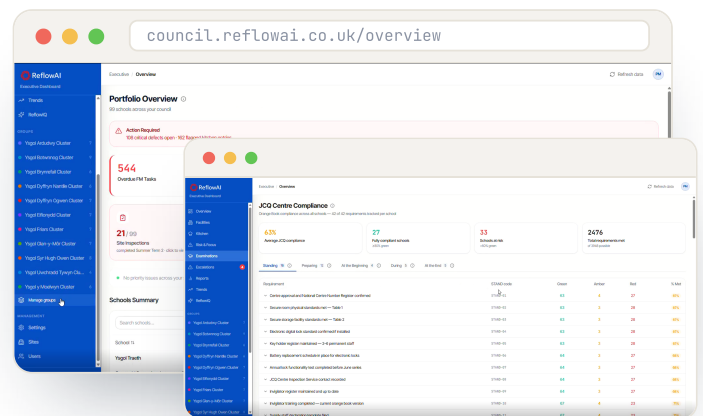

Cambridgeshire County Council, 2025: a single education-sector H&S fine. Fines scale with the size of the duty holder, and it only takes one school you couldn't see.

Fit for Audit surfaces the risk before the inspector does, across every school.

Your compliance officer is good at their job. They're also covering **15 schools** with two days a week and a boot full of lever arch files. They find problems when they visit. The question is what's happening in the 10 schools they haven't been to yet this term.

If you're honest: you don't know.

You get calls on Friday afternoons. You see inspection outcomes that could have been predicted six months earlier if anyone had been able to see what was building. Your current system, a shared drive, a spreadsheet, or nothing at all, gives you snapshots at best. **You're managing live risk across an estate you can only see in fragments.**

One **portfolio dashboard** across every school, with **escalations** raised, tracked and resolved.

Fit for Audit gives you the view you've never had.

Every school has a live compliance record, built by staff in the flow of daily work, not assembled for visits. You see which schools are current, which have gaps building, and where your compliance officer's time is actually needed. When a school raises an issue, it comes through with a status and a record, and when **JCO or HSE update their guidance, every school updates simultaneously**. No circulars. No chasing.

- ✓ **Live dashboard across every site:** compliance status at a glance, not a quarterly visit.
- ✓ **Risk surfacing by school:** know where problems are building before the inspector does.
- ✓ **Escalation management:** issues raised, tracked and resolved with a full audit trail.
- ✓ **Automatic framework updates:** every school stays current when regulations change.
- ✓ **Your compliance officer's time back:** focused on schools that need them, not ones that are fine.

Priced per school. Structured commercially for trusts and local authorities.

One rollout. Every site current from day one, with no circulars to distribute, no chasing to check it was actioned.
